

**FOR IMMEDIATE DISTRIBUTION**

## **jNETx Taps tekVizion for Integration, Development Expertise**

Open Standards Give Carriers Flexibility in Developing New Revenue Sources

RICHARDSON, TX June 21, 2004 – tekVizion™ PVS, Inc. has been named by jNETx, Inc. to provide integration services and custom application development to jNETx customers.

tekVizion, which offers professional services to network operators and service providers, is thoroughly versed in jNETx products, including the Open Convergent Feature Server (OCFS), a telecom application server that allows operators to offer services across disparate networks, and the Telecom Service Studio (TSS) which allows operators to quickly design and test new services.

tekVizion has already developed and deployed solutions for carriers based on the jNETx feature server, including a custom call screening application which was developed and deployed by tekVizion for a network operator in approximately 90 days. It has been operational for close to a year and is currently handling several million calls a day.

In addition, jNETx's OCFS is also running in tekVizion's Centerfield Solution Center<sup>SM</sup> and is being demonstrated in tekVizion's Executive Briefing Center (EBC). The EBC is designed to demonstrate how various solutions perform under real-world circumstances and to foster an environment for creating, testing, and validating new telecom services and customized applications.

The OCFS enables operators to offer services across the Internet, next generation and legacy networks regardless of specific underlying network elements or protocols. It complies with the ANSI, ETSI, 3GPP, 3GPP2 and IMT consolidating standards for service convergence across fixed and mobile, SS7 and IP networks. jNETx implements a JAIN SLEE framework, a Parlay Gateway, a full set of Open Service Access APIs and a wide range of resource components needed to build next generation communication services.

tekVizion's services include custom software development, multi-vendor interoperability, integration, test and support services. tekVizion specializes in developing solutions that span next generation and legacy networks.

"jNETx and tekVizion already have joint customers who know and rely on both companies to bring their legacy and next generation networks together," said Gary Miles, jNETx COO. "tekVizion's unique expertise with next generation platforms and experience creating services for converged networks make it an ideal partner for jNETx."

“jNETx embodies the qualities tekVizion looks for when bringing together products for its solutions,” said Lee Phillips, tekVizion CEO. “The jNETx platform makes use of open standards and open APIs for service creation. This means carriers have flexibility in selecting new network infrastructure and can leverage what they already have in place, saving them time and money. “

### **About tekVizion PVS**

tekVizion ([www.tekvizion.com](http://www.tekvizion.com)) designs and delivers converged solutions for service providers that transparently integrate legacy telecom assets with next generation products. tekVizion relies on seasoned telecom expertise, real-world multi-vendor integration and test experience, and focused business consulting services to deliver profitable and sustainable service offerings for the communications service provider market. This approach enables tekVizion to be an advocate for the service provider, entering into strategic partnerships with leading service and infrastructure providers that have made the company consistently profitable. tekVizion is located in the Telecom Corridor® in Richardson, Texas.

### **About jNETx, Inc.**

jNETx, Inc. provides carrier grade software components for network integrators and traditional equipment providers. jNETx components can be configured in a solution that allows service providers to design, test, provision and sell more revenue-generating services faster and for less money. jNETx, headquartered in Richardson, also has offices in Sophia Antipolis, France, and Moscow. More information is available at [www.jnetx.com](http://www.jnetx.com).
